According to our (Global Info Research) latest study, the global Amino Acid Chelated Manganese market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period.

Amino Acid Manganese Chelate Powder is a form of manganese supplement where the mineral manganese is bound or chelated with amino acids. A chelate is a compound in which a metal ion, in this case manganese, is bonded to a larger molecule—in this case, amino acids.

The chelation process helps to improve the bioavailability and absorption of manganese in the body. By binding manganese to amino acids, the resulting chelate is believed to be more easily absorbed and utilized by the body compared to other forms of manganese.
