## Abstracts

The global Amino Acid Chelated Manganese market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Amino Acid Manganese Chelate Powder is a form of manganese supplement where the mineral manganese is bound or chelated with amino acids. A chelate is a compound in which a metal ion, in this case manganese, is bonded to a larger molecule—in this case, amino acids.

The chelation process helps to improve the bioavailability and absorption of manganese in the body. By binding manganese to amino acids, the resulting chelate is believed to be more easily absorbed and utilized by the body compared to other forms of manganese.

This report studies the global Amino Acid Chelated Manganese production, demand, key manufacturers, and key regions.
