## Abstracts

According to our (Global Info Research) latest study, the global Amino Dicarboxylic Acid market size was valued at US\$ 943 million in 2025 and is forecast to a readjusted size of US\$ 1425 million by 2032 with a CAGR of 6.1% during review period.

Amino Dicarboxylic Acid refers to a class of organic compounds that contain two carboxyl groups ( $-\text{COOH}$ ) and one or more amino groups ( $-\text{NH}_2$ ) within the same molecule, with common examples including aspartic acid and glutamic acid; these molecules are key intermediates in biochemistry, polymer production (e.g., polyamides), pharmaceuticals, and food additives. The supply chain starts upstream with petrochemical feedstocks (e.g., maleic anhydride, acrylonitrile) or bio-based raw materials (e.g., glucose, sugars, fermentation substrates), followed by chemical synthesis routes (amination, hydrolysis) or biotechnological fermentation processes using engineered microorganisms to produce the amino dicarboxylic acids. Midstream involves purification (crystallization, ion exchange), concentration, and drying, often requiring high-purity control for food-grade or pharma-grade products. Downstream, these compounds are used in food and feed additives (flavor enhancers, nutrition), biodegradable polymers, resins, coatings, pharmaceuticals, and personal care formulations, with distribution handled by chemical suppliers and specialty ingredient distributors serving industries such as agriculture, healthcare, and advanced materials. In 2025, global Amino Dicarboxylic Acid output was about 500,000 tons with 650,000 tons of capacity, average prices of USD 1,500–4,000 per ton, and gross margins around 24%.
