According to our (Global Info Research) latest study, the global Amino Resin market size was valued at USD 14070 million in 2023 and is forecast to a readjusted size of USD 19520 million by 2030 with a CAGR of 4.8% during review period.

Amino resins are important materials that come under thermoset polymers. They are used in paints and coatings, molded articles, adhesives, and sealants. Amino resins are produced by reacting formaldehyde with amino compounds such as melamine, benzoguanamine, or urea. They have excellent tensile strength, hardness, and impact resistance. Amino resins are of three types: urea formaldehyde, melamine formaldehyde, and melamine urea formaldehyde.

UF resin occupy the largest share in Amino resins revenue followed by MF resin and MUF resin respectively. MF resin is the costliest amino resin while UF resin is the most economical.
