According to our (Global Info Research) latest study, the global Aminoglycosides market size was valued at USD 1080.6 million in 2023 and is forecast to a readjusted size of USD 1209.9 million by 2030 with a CAGR of 1.6% during review period.

Aminoglycoside is a medicinal and bacteriologic category of traditional Gram-negative antibacterial therapeutic agents that inhibit protein synthesis and contain as a portion of the molecule an amino-modified glycoside (sugar); the term can also refer more generally to any organic molecule that contains aminosugar substructures.

Aminoglycoside antibiotics display bactericidal activity against Gram-negative aerobes and some anaerobic bacilli where resistance has not yet arisen but generally not against Gram-positive and anaerobic Gram-negative bacteria.

Asia Pacific accounted for the largest share of revenue in 2014 that is due to higher incidence rate of multi-drug resistant tuberculosis that needs second line drugs for treatment is attributive towards a larger considerably larger share of kanamycin and capreomycin in the Asia Pacific region along with the significant availability of other aminoglycosides as well.
