Abstracts

The global Aminomethanesulfonic Acid market size is expected to reach \$ 275 million by 2032, rising at a market growth of 5.7% CAGR during the forecast period (2026-2032).

Aminomethanesulfonic Acid is an organosulfur compound containing both an amino group (-NH₂) and a sulfonic acid group (-SO₃H), making it a highly polar, water-soluble intermediate used in specialty chemicals, pharmaceuticals, water treatment formulations, analytical reagents, and chemical synthesis. The Aminomethanesulfonic Acid supply chain begins with upstream raw materials such as formaldehyde, sulfur dioxide/sulfites, ammonia or amines, sulfuric acid, and other sulfur-based intermediates produced by the petrochemical and inorganic chemical industries. In the midstream segment, specialty chemical manufacturers synthesize AMSA through sulfonation, aminomethylation, or related chemical processes, followed by purification, crystallization, drying, and packaging. Downstream applications include pharmaceutical intermediates, chelating agents, water treatment chemicals, specialty surfactants, laboratory reagents, electroplating additives, and research chemicals, with end users spanning the pharmaceutical, chemical manufacturing, water treatment, electronics, and academic research sectors. In 2025, global Aminomethanesulfonic Acid output was about 80,000 tons with 100,000 tons of capacity, average prices of USD 2,000-4,000 per ton, and gross margins around 26%.
