According to our (Global Info Research) latest study, the global Aminomethyl Resin market size was valued at US\$ 1320 million in 2025 and is forecast to a readjusted size of US\$ 1894 million by 2032 with a CAGR of 5.3% during review period.

Aminomethyl Resin is a functional polymer resin containing aminomethyl ($-CH_2NH_2$) groups attached to a polymer backbone, typically based on polystyrene-divinylbenzene (PS-DVB), polyethylene glycol (PEG), or other crosslinked matrices. It is widely used as a solid support in peptide synthesis, organic synthesis, combinatorial chemistry, affinity chromatography, ion-exchange processes, and biopharmaceutical purification due to its reactive amino functionality and high chemical stability. The supply chain begins with upstream raw materials such as styrene, divinylbenzene, chloromethylating agents, formaldehyde, ammonia, specialty solvents, and polymerization catalysts. Resin manufacturers polymerize and functionalize the base resin through chloromethylation and amination reactions to produce aminomethyl-functionalized beads with controlled particle size, porosity, crosslinking degree, and loading capacity. Midstream participants include specialty resin producers, chromatography media suppliers, and life-science material manufacturers that formulate and customize the resin for specific applications. Downstream users include pharmaceutical and biotechnology companies for peptide and oligonucleotide synthesis, contract research organizations (CROs), academic research laboratories, diagnostic reagent manufacturers, chemical synthesis companies, and industrial separation and purification facilities. The market is closely linked to growth in biopharmaceutical manufacturing, peptide therapeutics, solid-phase synthesis technologies, and advanced purification processes. In 2025, global Aminomethyl Resin output was about 800,000 tons with 900,000 tons of capacity, average prices of USD 1,300-3,000 per ton, and gross margins around 26%.
