According to our (Global Info Research) latest study, the global Aminomethylsulfonic Acid market size was valued at US\$ 186 million in 2025 and is forecast to a readjusted size of US\$ 275 million by 2032 with a CAGR of 5.7% during review period.

Aminomethylsulfonic Acid is an organosulfur compound containing both an amino group (-NH₂) and a sulfonic acid group (-SO₃H) linked through a methylene bridge (CH₂), typically represented by the molecular formula CH₂NO₂S. It is a highly polar, water-soluble intermediate used in specialty chemicals, pharmaceutical synthesis, agrochemical formulations, ion-exchange materials, surfactants, and biochemical research. The supply chain begins with upstream raw materials such as formaldehyde, sulfur dioxide/sulfites, chloromethanesulfonic acid derivatives, ammonia, and other amine sources, which are supplied by petrochemical and inorganic chemical producers. In the midstream stage, chemical manufacturers synthesize Aminomethylsulfonic Acid through sulfonation, amination, or Mannich-type reactions, followed by purification, crystallization, and packaging. Downstream, the product is utilized by pharmaceutical companies, agrochemical manufacturers, specialty chemical producers, water-treatment chemical suppliers, polymer additive manufacturers, and research laboratories for the production of active ingredients, intermediates, catalysts, and functional materials. The market is closely linked to developments in fine chemicals, pharmaceuticals, and specialty materials industries. In 2025, global Aminomethylsulfonic Acid output was about 80,000 tons with 100,000 tons of capacity, average prices of USD 2,000-4,000 per ton, and gross margins around 26%.
