According to our (Global Info Research) latest study, the global Ammonia from Coal market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

The market share of coal-to-synthetic ammonia in the entire synthetic ammonia industry is decreasing year by year.

After the raw coal is pulverized, it is sent to the gasifier for gasification to make gas containing H₂ and CO. Then, various purification methods are used to remove dust, H₂S, organic sulfides, CO, and CO₂ in the gas. and other harmful impurities to obtain a clean 1:3 nitrogen-hydrogen mixture that meets the requirements of ammonia synthesis. Finally, the nitrogen-hydrogen mixture is compressed to above 15Mpa to synthesize ammonia with the help of a catalyst. The process steps can be roughly divided into several parts: gas generation, purification, conversion, and ammonia synthesis.
