Ammonia decomposition and elution equipment is an industrial device used to separate adsorbed ammonia from catalysts, adsorbents or other solid materials. Through heating and solvent elution, the ammonia decomposition and elution equipment can effectively remove ammonia from the surface and pores of solid materials and restore their activity and adsorption capacity. This equipment is widely used in the fields of chemical, petroleum and environmental protection to improve production efficiency and resource utilization.

Ammonia decomposition and elution equipment is of great significance in industrial applications. It can not only effectively recycle and reuse catalysts and adsorbents, improve production efficiency and economic benefits, but also reduce waste generation and environmental pollution. With the increasingly stringent environmental regulations and the increasing requirements for resource utilization, the technological progress and application promotion of ammonia decomposition and elution equipment will become the key driving force for the sustainable development of related industries.
