According to our (Global Info Research) latest study, the global Ammonium Lauryl Sulphate market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

Ammonium lauryl sulfate is a detergent cleansing agent and a key ingredient found in shampoos and personal care products. It belongs to a class of medium to strong anionic surfactants known as the alkyl sulfates. It has characteristics of excellent decontamination, high biodegradable ability and good foaming property. Ammonium lauryl sulfate has a yellowish color and are partly soluble in water and oil. The solution has a moderate concentration of hydrogen ions and PH less than 7. Ammonium lauryl sulfate is an anionic surfactant which reduces the surface tension of water and makes the water spread more easily. It is used in cleaners because it disrupts hydrogen bonding in water. Ammonium lauryl sulphate is obtained by catalytic reduction of fatty acids which are found in coconut oil and palm kernel oil. It is also known as dodecyl ammonium sulfate, monododecyl ester and ammonium salt.

Growing consumerism is driving the demand for personal care products, which in turn is driving the ammonium lauryl sulfate market. The surfactants markets largely depends on the rapidly emerging middle classes in the Asia Pacific region especially China and India. Rise in income levels will increase the per capita consumption of cosmetics and beauty products in emerging economies. However growing awareness for natural products and environment consciousness could hamper the growth of this market during the forecast period.
