According to our (Global Info Research) latest study, the global Ammonium Polyphosphate (Phase II) market size was valued at USD 480.8 million in 2023 and is forecast to a readjusted size of USD 624.1 million by 2030 with a CAGR of 3.8% during review period.

Ammonium Polyphosphate (APP) are a class of ammonium salts. The physical properties of this class of chemicals vary as a function of the degree of phosphate condensation. Short-chain APP is water soluble, while longer chain APP has lower water solubility. APP II structure is cross linked/ branched. The molecular weight is much higher than APP I with 'n' value higher than 1000. APP II has a higher thermal stability (decomposition starts at approximately 300°C) and lower water solubility than APP I.
