According to our (Global Info Research) latest study, the global Ammonium Sulfate Fertilizer market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

Ammonium sulfate $[(\text{NH}_4)_2 \text{SO}_4]$ was one of the first and most widely used nitrogen (N) fertilizers for crop production?it is used primarily where there is a need for supplemental N and S to meet the nutritional requirement of growing plants. The active ingredients in it are nitrogen and sulfur. Correct use of this fertilizer maintains healthy nitrogen levels in the soil and, in the case of alkaline soils, helps to maintain a good pH balance. When used in excess, however, it can cause a range of undesirable plant conditions, such as excessive leaf growth, weak plant bodies, and excessive thatch in lawns.

This fertilizer can be applied directly to the soil either singly or mixed with some other fertilizers. It can also be dissolved in water and applied as soil drench, or distributed with irrigation water, or applied as foliar spray.

In United States, Ammonium Sulfate Fertilizer key players include Rentech (PCI), APF, DSM, Agrium, etc. Global top four manufacturers hold a share over 45%.

In terms of product, AS based Blended Fertilizers is the largest segment, with a share about 60%. And in terms of application, the largest application is Grain, followed by Cash Crops.
