The global Amniotic Tissue Allografts market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Amniotic tissue allografts are biomedical products derived from donated amniotic tissues, which are collected during the delivery of a baby by a consenting mother. Amniotic tissue allografts undergo extensive processing to create a graft or patch that can be used in various medical procedures. These allografts contain a variety of beneficial factors, such as growth factors, cytokines, and extracellular matrix proteins, which contribute to tissue regeneration and wound healing. They are commonly used in surgical applications, such as treating chronic wounds, promoting tissue repair, and reducing inflammation.
