According to our (Global Info Research) latest study, the global Amorphous Carbon Coating market size was valued at US\$ 936 million in 2024 and is forecast to a readjusted size of USD 1284 million by 2031 with a CAGR of 4.6% during review period.

An amorphous carbon coating is a carbon - based coating material that exists in an amorphous state. It is mainly composed of carbon atoms but lacks the regular crystalline structure like graphite or diamond, with the atoms arranged in a disordered manner. This coating can be deposited on the surface of various substrate materials through multiple technical means such as physical vapor deposition (PVD) or chemical vapor deposition (CVD) to form a protective film with special properties.
