The global Amorphous Core Transformers market size is expected to reach \$ 1339.4 million by 2029, rising at a market growth of 0.3% CAGR during the forecast period (2023-2029).

Global key players of amorphous core transformers include Hitachi Industrial Equipment Systems, ABB, Siemens, etc. The top three manufacturers hold a share over 20%. Asia-Pacific is the largest market, with a share over 45%, followed by Americas, and Europe, both have a share about 40 percent.

Amorphous metal is a solid metallic material with high magnetic conductivity that provides energy saving performance. The metal atoms are disordered and arranged in non-crystal way. Amorphous metal is different from conventional steel because is easier to be magnetized and de-magnetized. Amorphous metal sheet is 0.02 mm thick, which is about 1/10 of conventional silicon steel. An amorphous core transformer is a highly efficient electrical transformer, which has a magnetic core comprised of ferromagnetic amorphous metal alloyed with a glass former. This ribbon of steel is wound to form the transformers core. The materials used in amorphous core transformers have high magnetic susceptibility, low coercivity and high electrical resistance.
