According to our (Global Info Research) latest study, the global Amorphous Magnetic Isolation Sheet market size was valued at US\$ 209 million in 2025 and is forecast to a readjusted size of US\$ 354 million by 2032 with a CAGR of 6.7% during review period.

In 2025, global production of amorphous magnetic shielding sheets is approximately 29 million units, with an average selling price of \$7 per unit.

Amorphous magnetic isolation sheets are soft magnetic materials made from amorphous alloys, exhibiting a long-range atomic disorder. A typical product consists of four components: a protective film, an amorphous magnetic material layer, double-sided tape, and a release film. They are widely used in electromagnetic shielding, high-frequency transmission, and new energy applications.

Key market drivers include the following:

First, market growth for amorphous magnetic shielding sheets is driven by rising demand for wireless charging, NFC communication, and electromagnetic shielding. In devices such as smartphones, wearables, tablets, smart cards, wireless charging terminals, and certain automotive electronics, coils are susceptible to interference from metal components and complex electromagnetic environments. Amorphous magnetic shielding sheets can guide magnetic fields, reduce eddy current losses, and improve energy transmission efficiency, making them highly valuable for thin, lightweight electronic products and wireless interaction scenarios.

Second, there is an increasing demand for device miniaturization, lightweighting, and

high reliability in consumer electronics and automotive electronics. Internal space in terminal devices is limited, and traditional magnetic materials struggle to simultaneously achieve thinness, flexible fit, and optimal magnetic performance. Amorphous materials offer high magnetic permeability, low loss, and excellent processability; they can be adapted to various structural designs through lamination, slicing, and film coating. As wireless charging power increases and device structures become more compact, the role of shielding sheets in thermal management, electromagnetic compatibility, and efficiency optimization becomes increasingly significant. Furthermore, the development of domestic consumer electronics supply chains and the trend toward intelligent new energy vehicles are creating new opportunities for amorphous magnetic shielding sheets. Products such as wireless charging modules, in-vehicle NFC systems, smart cockpits, and wearable devices require magnetic functional materials that offer consistent quality, a slim profile, and suitability for mass production. Future market competition will center on material consistency, thickness control, permeability stability, heat resistance, die-cutting capabilities, and customization services. Suppliers capable of deep collaboration with end-brand manufacturers, module makers, and coil producers will be better positioned to enter core supply chains.
