The global Amorphous Metal market size is expected to reach \$ 771 million by 2032, rising at a market growth of 7.1% CAGR during the forecast period (2026-2032).

Amorphous metal is a type of metal or metal alloy in which the atoms are arranged without long-range crystalline order, unlike conventional crystalline metals. Its atomic structure is random and glass-like, which gives it unique properties such as high strength, high hardness, good wear resistance, excellent corrosion resistance, and, in the case of iron-based alloys, low magnetic loss and high permeability. Amorphous metals are typically produced through rapid solidification techniques that cool the molten alloy so quickly that crystals do not have time to form, resulting in a homogeneous, non-crystalline solid structure.

The market is driven by various end-user industries, Amorphous metal can be used to replace silicon steel, Permalloy, and ferrites excellent materials to make transformer cores for high-frequency switch mode power supplies, current transformer cores, transformer cores for ground-fault-interrupters, cores for filters, storage inductors, and reactors, EMC common mode chokes, sensor cores, cores for saturable reactors, magnetic amplifiers, beads, and pulse compressors.

The global key companies of Amorphous Metal include Qingdao Yunlu, Proterial, Ltd., Advanced Technology, Zhao Jing Science and Technology, Jiangsu Guoneng Alloy Technology, and etc. In 2024, the global five largest players hold a share approximately 97% in terms of revenue.
