Abstracts

The global Amorphous PFC Core market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Amorphous PFC cores have high magnetic permeability, low hysteresis loss, wide operating frequency range, and good temperature stability, and are widely used in power electronics, transformers and other fields.

The amorphous PFC core is a special magnetic core material, usually made of amorphous alloy, where PFC stands for Permalloy Ferrite Composite. It has excellent magnetic properties such as high magnetic permeability and low hysteresis loss. The preparation process of amorphous PFC magnetic cores generally uses sputtering deposition, rapid solidification and other methods. By controlling the cooling rate and preparation process of the alloy, the alloy has an amorphous structure.

This report studies the global Amorphous PFC Core production, demand, key manufacturers, and key regions.
