According to our (Global Info Research) latest study, the global Amorphous Transformers market size was valued at USD 1311.9 million in 2023 and is forecast to a readjusted size of USD 1620.3 million by 2030 with a CAGR of 3.1% during review period.

Amorphous transformer, also known as amorphous alloy transformer, is a special type of power transformer whose core is made of amorphous alloy material instead of the traditional crystalline silicon core. Amorphous alloy materials have the advantages of low loss, high efficiency and small size, and therefore are widely used in power transmission and distribution. As electronic equipment becomes high-frequency and ultra-high-frequency, amorphous transformers will adapt to a wider frequency range to meet the needs of new power electronic equipment. Amorphous transformers may integrate intelligent control and monitoring functions to improve system operability and remote monitoring capabilities.
