Abstracts

The global AMS Acid and Alkali Resistant Film market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

AMS acid and alkali resistant film is a special film material with acid and alkali resistance. AMS is the abbreviation of Ammonium Metastannate, and its Chinese name is ammonium stannite. AMS acid and alkali resistant film is made of ammonium stannite as the main component and prepared through a special process. AMS acid and alkali resistant membrane has the following characteristics: 1. Acid and alkali resistance: AMS acid and alkali resistant membrane has good chemical stability in acidic and alkaline environments, can resist the erosion of a variety of strong acids and alkalis, and is not prone to swelling, Dissolve or break. 2. Temperature resistance: AMS acid and alkali resistant film still maintains good acid and alkali resistance under high temperature conditions, and can withstand the effects of high temperature acid and alkali media within a certain range. 3. Electrical insulation properties: AMS acid and alkali resistant film has good electrical insulation properties and can be used as insulation materials in the electronic and electrical fields. 4. Mechanical strength: AMS acid and alkali resistant film has high mechanical strength and wear resistance, and can resist external forces to a certain extent. AMS acid and alkali resistant membranes are widely used in chemical industry, electronics, batteries and other fields for the separation, filtration and protection of corrosive media, as well as electrical insulation, battery separators, etc.
