According to our (Global Info Research) latest study, the global Analog Frequency Synthesizer market size was valued at US$ 1507 million in 2025 and is forecast to a readjusted size of US$ 2311 million by 2032 with a CAGR of 6.4% during review period.

The frequency synthesizers are virtual devices with applications in various sectors like research and measurement, military and aerospace and telecommunications. The key features of these devices are high signal clarity, low phase noise, high switching speed and wide output frequency range. The Analog Frequency Synthesizer has comparatively enhanced signal clarity than that of digital type synthesizers and better phase noise performance.

A shift in market requirements towards higher operating frequencies and the wider modulation bandwidths is expected due to new technologies like 5G and the next generation of wireless cellular technology. It is expected that the demand will be driven by wireless communications, aerospace and defense, automotive industries, and new technologies like 5G. The availability of RF capable ICs and chips and an increase in the adoption of mobile phones have contributed to significant growth of the market. The reduced factor of the RF capable ICs and chips easily enable integration.
