The global Analog Night Vision Observation Device market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Analog night vision observation devices are optoelectronic devices which produce an image quite similar to the one you see with your eyes, just with other colors. Night vision observation devices amplify the rest light in the night with the help of a photocathode and an image intensifier tube, so you get a brighter image for observing at night. These night optical devices operate in the visible and also near-infrared spectrum, while thermal devices operate only in the infrared spectrum.
