According to our (Global Info Research) latest study, the global Amorphous Nanocrystalline Magnetic Cores market size was valued at USD 1131.8 million in 2023 and is forecast to a readjusted size of USD 1993.4 million by 2030 with a CAGR of 8.4% during review period.

Amorphous metal is an alloy with a non-crystalline structure produced by ultra-rapid quenching (about 1 million ? per second) of molten alloy. Because amorphous metal has no anisotropic properties, which originated from a crystalline structure, and there are no crystalline grain boundaries to prevent motion of magnetic domain walls, it shows excellent magnetic properties such as high permeability and low loss while having a high-saturation magnetic flux density.
