Abstracts

The global Analog Type Intercom Systems market size is expected to reach \$ 2197 million by 2032, rising at a market growth of 4.1% CAGR during the forecast period (2026-2032).

Analog intercom systems are building intercom and security communication devices that achieve voice or video communication based on analog audio and video signal transmission. They are mainly used in residential communities, older buildings, budget commercial buildings, and some industrial settings. They are characterized by low cost, simple structure, and high stability. Based on estimates of existing and new demand for building security equipment, global sales of analog intercom systems in 2025 were approximately 4.2 million units, with an average unit price of approximately US\$380 and a capacity utilization rate of approximately 73%. The upstream of the industry chain mainly includes audio processing chip manufacturers, analog circuit component suppliers, camera module manufacturers, and plastic and metal structural component companies. The midstream consists of intercom equipment manufacturers and system integrators. The downstream covers real estate developers, property management companies, urban renewal project contractors, industrial parks, and operators of small and medium-sized commercial facilities. The overall gross profit margin is approximately 25%, with companies possessing large-scale manufacturing capabilities and channel advantages reaching 32%. The cost structure is mainly composed of main control and audio/video processing modules (approximately 26%), cameras and audio devices (approximately 18%), structural components and housings (approximately 16%), power supply and wiring components (approximately 14%), assembly and testing (approximately 10%), channels and logistics (approximately 9%), and other costs (approximately 7%). On the demand side, the downstream demand list includes the renovation of old residential areas, security needs of affordable housing, basic

communication needs in industrial scenarios, and access management needs of small and medium-sized commercial buildings. The downstream customer list includes real estate developers, property management companies, urban renewal project units, industrial park managers, and small and medium-sized commercial property operators. On the business opportunity side, policy drivers come from the renovation of old residential areas, the construction of affordable housing, and the improvement of grassroots security systems. Technological innovation drivers are reflected in the transition from analog to digital convergence, improved equipment stability, and cost optimization. Changes in consumer demand are reflected in the continued existence of users' demand for low-cost basic security, while gradually transitioning towards higher security and convenience.

Analog intercom systems, as a traditional product in the building security field, are currently being gradually replaced by digital and intelligent systems. However, they still have stable demand in certain markets. On the one hand, in the renovation of old residential areas and cost-sensitive projects, analog systems continue to be used due to their low price, simple deployment, and low maintenance costs. On the other hand, in some developing markets and small and medium-sized commercial projects, users have limited demand for complex intelligent systems, allowing analog products to still have a place in the market. From the perspective of industry development trends, the future market will show a gradual contraction but will not disappear rapidly. Demand is mainly concentrated in the replacement of existing stock and low-end new projects, while some manufacturers... Merchants extend product lifecycles by introducing partial digital functions into analog systems to upgrade their products. From a competitive perspective, the low barriers to entry in the industry have led to fierce market competition and continuous price pressure. Companies need to maintain competitiveness through cost control and in-depth channel cultivation. The key to the future development of the industry lies in balancing cost and function, and appropriately improving product performance and reliability while meeting basic needs. In the long run, with the development of smart communities and smart homes, analog intercom systems will be gradually replaced by digital intercom and smart security systems. However, they will still maintain a certain scale in price-sensitive and basic demand scenarios, showing an overall trend of slow decline and structural adjustment.
