The global Analog Voltage Type Flame Sensor market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

The analog voltage type flame sensor is a sensor that detects flames. It determines whether there is a flame by measuring the light intensity of the surrounding environment. The sensor converts the detected light intensity into a voltage signal output, thereby detecting the flame. Different from the digital signal type flame sensor, the analog voltage type flame sensor outputs a continuous voltage signal, which needs to be processed and judged through analog circuits.

This report studies the global Analog Voltage Type Flame Sensor production, demand, key manufacturers, and key regions.
