Abstracts

The global Analytical and Testing Equipment market size is expected to reach \$ 91155 million by 2032, rising at a market growth of 6.6% CAGR during the forecast period (2026-2032).

Analytical and testing equipment refers to instruments used to identify, quantify or continuously monitor chemical composition, concentration, structure, physical properties and pollutant indicators. The market mainly covers three application areas: environmental monitoring, industrial process analytics and laboratory analysis. Environmental monitoring focuses on air, water, soil, flue gas, greenhouse gases, VOCs, particulate matter and emission sources; industrial process analytics is used for online gas, liquid and composition measurement in petrochemical, chemical, power, steel, cement, pharmaceutical, food and beverage, semiconductor and new energy production; laboratory analysis includes chromatography, mass spectrometry, spectroscopy, elemental analysis, thermal analysis, electrochemical analysis, sample preparation and laboratory automation. Analytical and testing equipment covers a wide range of product types, and prices can vary significantly across different types of instruments.

Global market growth is mainly driven by stricter environmental regulation, more precise industrial process control, higher-throughput laboratory testing, food and drug safety, semiconductor and new energy material analysis, and carbon-emission and greenhouse-gas monitoring. In environmental applications, stricter requirements for air quality, emission sources, water quality, VOCs, PFAS, microplastics and greenhouse gases are pushing upgrades in online monitoring and high-sensitivity laboratory instruments. In industrial processes, petrochemical, chemical, power, steel, cement, pharmaceutical and semiconductor producers increasingly use online analyzers to optimize processes, stabilize product quality, improve safety and reduce emissions. In laboratories, drug

discovery, food safety, life sciences, materials R&D and third-party testing continue to support demand for LC-MS, GC-MS, ICP-MS, ion chromatography, spectroscopy and automated sample preparation systems.
