An anchor depth gauge is an instrument used to measure the depth of anchor grooves, usually used to measure the depth of bolts, screws and nuts. It consists of a depth gauge, a handle and a measuring head. The depth gauge is the core component of the instrument, which consists of a vertical magnet and an amplifier, which can accurately measure the depth of the anchor pattern. The handle is the part used to operate the depth gauge, which adjusts the depth gauge's magnets for accurate measurements. The measuring head is a component used to measure the depth of the anchor pattern. It can measure the depth of one anchor pattern or the depth of multiple anchor patterns.
