Abstracts

The global Anesthetic Gas Purification System market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

The Anesthetic Gas Removal System is an active system that removes anesthetic gas mixtures from operating rooms and any other areas containing nitrous oxide terminal units. Removed at source, thereby eliminating possible long-term health hazards to exposed medical personnel. By design, active processing systems can produce high levels of capture by simply connecting the terminal unit to the anesthetic breathing circuit through a receiver unit, thereby eliminating most of the 'contamination' at source.

This report studies the global Anesthetic Gas Purification System production, demand, key manufacturers, and key regions.
