Abstracts

The global Angle Displacement Sensor market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

An angular displacement sensor is a sensor used to measure the rotation angle and position of an object. It usually consists of a rotating part and a fixed part, one of which is connected to the rotating object and the other is fixed to the relatively stationary part. As the rotating part moves, the sensor will output a signal related to its motion. The angular displacement sensor adopts a non-contact patented design. Compared with other traditional angular displacement measuring instruments such as synchronous analyzers and potentiometers, it effectively improves the long-term reliability and has a wide application prospect.

This report studies the global Angle Displacement Sensor production, demand, key manufacturers, and key regions.

This report is a detailed and comprehensive analysis of the world market for Angle Displacement Sensor, and provides market size (US\$ million) and Year-over-Year (YoY) Growth, considering 2022 as the base year.
