## Abstracts

The global Angular Pin market size is expected to reach \$ million by 2030, rising at a market growth of % CAGR during the forecast period (2024-2030).

An angular pin is a component used in injection molding molds to facilitate the molding of products with undercuts. It operates within a special mold feature known as a slide core, enabling the production of complex shapes. Angular pins, typically cylindrical, demand high precision and durability due to their contact with the slide core. They are crafted from wear-resistant materials like high-strength tool steel to withstand the rigors of use.
