## Abstracts

The global Anhydrides Curing Agents market size is expected to reach \$ 379 million by 2032, rising at a market growth of 5.4% CAGR during the forecast period (2026-2032). In 2025, global anhydride curing agent production reached approximately 142 kilotons, the average price is 1800 usd/ton. Anhydride curing agent is a kind of chemical substances used to react with epoxy resin to form three-dimensional crosslinked network structure, so that epoxy resin from liquid or thermoplastic solid to insoluble thermosetting solid.

**Market Concentration and Key Players:**

Internationally, the market concentration of anhydride epoxy curing agent is relatively high, mainly concentrated in developed countries such as Europe, America and Japan. For example, Evonik and Hexion and other large manufacturers; from the domestic point of view, anhydride epoxy curing agent still has a lot of room for development.

**Manufacturing Processes and Market Trends:**

The preparation process of anhydride epoxy curing agent usually involves chemical reactions such as condensation and addition, such as esterification reaction between anhydride and hydroxyl compound (such as fatty alcohol polyoxyethylene ether), ring-opening esterification with epoxy resin, and finally capping with polyamine to form a product with curing ability. There are also compounding processes for specific applications, such as mixing liquid anhydride, cycloaliphatic amine curing agent, toughening agent and accelerator in certain proportions and sequences at specific temperatures to prepare curing agent components for composite pultrusion. In order to improve mixing uniformity and quality, modern production processes use equipment with stirring, heating and rapping devices to prevent the material from sticking to the wall, and finally filtration and screening.

In terms of market trends, anhydride curing agents continue to grow in market demand due to their advantages of green environmental protection, long service life and good

compatibility. Although China anhydride curing agent industry started late, it has developed rapidly. Local enterprises such as Puyang Huicheng and Zhengdan have already possessed large-scale strength. In the future, with the improvement of material performance requirements by downstream industries, alicyclic anhydride (such as methyl tetrahydrophthalic anhydride and methyl hexahydrophthalic anhydride) is expected to further increase its market share due to its excellent weather resistance and electrical insulation.
