According to our (Global Info Research) latest study, the global Anhydrous Dextrose market size was valued at US\$ million in 2024 and is forecast to a readjusted size of USD million by 2031 with a CAGR of %during review period.

Anhydrous Dextrose is a form of glucose made from starch of corn. Just like sugar, it is sweet in nature but contain around 20% less sweetness as compared to sugar made from sugarcane. Dextrose Anhydrous does not contain any water, produced in crystalline or powder form. Dextrose, like fructose and glucose, is a monosaccharide also known as simple sugar. Simple sugars can be combined to produce complex sugars such as sucrose. Human body metabolizes each unit of simple sugar whereas complex sugars are not easily metabolized by body. Dextrose Anhydrous is widely used as a nutrition supplement and a sweetener in food production. Apart from food, it is also used in beverage, animal feed, pharmaceutical and various other industries. Most commonly, Dextrose Anhydrous is used as a nutritional supplement in infant formula to improve nutrition value and as a sweetener it is used in confectionery to provide taste & in bakery to boost yeast growth and improve appearance. Also, it is used as Buffering agent veterinary medicine and nutrition supplement in Agriculture/Animal Feed Market. There are various other applications of Dextrose Anhydrous such as used as antioxidant and fermentation substrate in production of various vitamins, amino acids and other organic products, in manufacturing of various organic substance to provide energy and as an antioxidant in Leather processing.
