According to our (Global Info Research) latest study, the global Anhydrous Ferrous Chloride market size was valued at US\$ million in 2024 and is forecast to a readjusted size of USD million by 2031 with a CAGR of %during review period.

In this report, we will assess the current U.S. tariff framework alongside international policy adaptations, analyzing their effects on competitive market structures, regional economic dynamics, and supply chain resilience.

Anhydrous Ferrous Chloride is an inorganic compound with a chemical formula of  $\text{FeCl}_2$ . It is the anhydrous form of ferrous chloride, that is, a pure substance without crystal water. Anhydrous ferrous chloride is usually a green or blue-green solid at room temperature, has a pungent odor, and is easily deliquescent, that is, it easily absorbs moisture in the air and converts into a hydrated crystal. Anhydrous ferrous chloride is an important chemical raw material with a wide range of applications in many fields. For example, in the electroplating industry, anhydrous ferrous chloride can be used as an additive in electroplating solutions to provide corrosion protection for metal surfaces; in the chemical industry, it can be used as a starting material for many compounds, such as ferric chloride, iron phosphide, etc.; in addition, anhydrous ferrous chloride can also be used in water treatment as a deoxidizer or deoxidizer to remove impurities and pollutants in water.

Anhydrous ferrous chloride is widely used in many industrial fields, especially in electroplating, chemical reagents, water treatment and other industries. In the electroplating industry, anhydrous ferrous chloride is used as an electrolyte in the metal electroplating process to provide corrosion protection for metal parts. In the field of

chemical reagents, anhydrous ferrous chloride can be used as a raw material for compounds such as ferric chloride and iron phosphide, and participates in the preparation of chemical reagents. In the field of water treatment, anhydrous ferrous chloride is used for deoxidation, deoxygenation and other reactions to effectively remove impurities and pollutants in water. In summary, the anhydrous ferrous chloride market shows a stable growth trend worldwide.
