According to our (Global Info Research) latest study, the global Anhydrous Hydroxybenzotriazole market size was valued at USD 70 million in 2022 and is forecast to a readjusted size of USD 95 million by 2029 with a CAGR of 4.4% during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

Hydroxy benzotriazole, abbreviated HOBt, is an inorganic compound that is a derivative of benzotriazole. HOBt, as a commercial product, is a white crystalline powder that contains some water (~11.7% wt as the HOBt monohydrate crystal). Anhydrous HOBt is explosive. It is mainly used to suppress the racemization of single-enantiomer chiral molecules and to improve the efficiency of peptide synthesis. Automated peptide synthesis involves the condensation of the amino group of protected amino acids with the activated ester. HOBt can be used to produce activated esters such as N-hydroxysuccinimide ester. These esters are insoluble and react with amines at ambient temperature to give amides. HOBt is also used for the synthesis of amides from carboxylic acids and from amino acids. These substrates may not be convertible to acyl chlorides. For instance, amide derivatives of ionophoric antibiotics have been prepared in this way.
