The global Anhydrous Sodium Sulphate market size is expected to reach \$ 2177 million by 2032, rising at a market growth of 4.5% CAGR during the forecast period (2026-2032).

Anhydrous sodium sulfate is an important inorganic salt chemical product, with the chemical formula Na_2SO_4 . It is a white crystalline powder or granular solid with good stability and strong chemical inertness. It is mainly used as a filler, additive or basic chemical raw material in industrial production, and is widely used in industries such as detergents, glass manufacturing, textile printing and dyeing, papermaking, chemical and metallurgical industries. It is mainly used as a filler in laundry detergent and cleaning agents, and is used in the glass industry to improve melting performance and reduce bubble content. It is one of the bulk chemicals with a large amount of usage in the basic chemical industry. In 2025, global Anhydrous Sodium Sulphate production reached approximately 13,613 K MT, with an average global market price of around US\$ 114 per MT.

The global anhydrous sodium sulfate market is showing a stable development trend as a whole, with demand mainly coming from the detergent and glass industries. The detergent industry is still the largest consumer sector, but with the upgrading of detergent formulas and the promotion of environmentally friendly products, some regions have adjusted the amount of fillers used. At the same time, demand in the glass, chemical, and paper industries remains stable, driving the industry to maintain a certain scale of growth. In the future, market development will rely more on the prosperity of downstream consumer industries and the upgrading of products towards high purity, customization, and refinement.
