## Abstracts

Animal blood is one of the main by-products of animal slaughtering and processing. It has rich protein content and high nutritional value. Plasma protein, as an important protein material, can be used for animal feed and food processing. Studies have shown that plasma proteins are enzymatically treated to obtain hydrolysates consisting of small peptides and amino acids, which are more easily digested and absorbed by the body. At the same time, they show antioxidant properties, inhibition of angiotensin converting enzyme activity, attenuation, and other functional properties and can be used as potential nutrients. Supplements, food additives, and nutraceuticals.

Scope of the Report:

This report focuses on the Animal Blood Plasma Products and Derivatives in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application.

Plasma protein is the most important solid component in plasma, and its amino acid content is rich and its nutritional value is high. At present, it is mainly processed into plasma protein powder as livestock feed or nutritional supplement, or as a raw material or additive for various food systems [11]. Studies have shown that plasma proteins are hydrolyzed by specific enzymes to produce hydrolysates consisting of small peptides and amino acids, which are more easily digested and absorbed by the human body. At the same time, they show antioxidation, inhibition of angiotensin-converting enzyme (ACE) and attenuation. The functional properties of peptides isolated from them have

been widely studied as potential nutritional supplements, food additives and nutraceuticals.

The worldwide market for Animal Blood Plasma Products and Derivatives is expected to grow at a CAGR of roughly 8.0% over the next five years, will reach 1630 million US\$ in 2023, from 1030 million US\$ in 2017, according to a new GIR (Global Info Research) study.
