According to our (Global Info Research) latest study, the global Animal Embryo Culture Medium for Laboratory Use market size was valued at USD 671.3 million in 2023 and is forecast to a readjusted size of USD 880.5 million by 2030 with a CAGR of 4.0% during review period.

Medical embryo culture medium mainly includes water, inorganic ions, energy substrates, amino acids, vitamins, proteins and other components. Each of these components plays an important role in the growth and development of the embryo. After the test tube baby technology takes the sperm and eggs out of the body, the fertilization, cleavage, and blastocyst formation are completed in vitro, and the whole process is carried out in the culture medium. For fertilized embryos, the culture medium provides a suitable environment and essential nutrients for the growth and development of the embryos in vitro.
