## Abstracts

The global Animal Embryo Culture Medium for Laboratory Use market size is expected to reach \$ 880.5 million by 2030, rising at a market growth of 4.0% CAGR during the forecast period (2024-2030).

Medical embryo culture medium mainly includes water, inorganic ions, energy substrates, amino acids, vitamins, proteins and other components. Each of these components plays an important role in the growth and development of the embryo. After the test tube baby technology takes the sperm and eggs out of the body, the fertilization, cleavage, and blastocyst formation are completed in vitro, and the whole process is carried out in the culture medium. For fertilized embryos, the culture medium provides a suitable environment and essential nutrients for the growth and development of the embryos in vitro.
