## Abstracts

By 2050, the global population will expand to 9 billion - a two-thirds increase in future animal protein consumption. Population and income growth will bring about an increase in the consumption of animal protein. The growing demand for protein has given producers an opportunity to improve their production and profitability. Jianming's "all-round nutrition" solution meets two basic needs: providing healthy and safe nutrition solutions and maintaining good economic benefits.

### Scope of the Report:

This report focuses on the Animal Health Care in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application.

The main drivers of global market growth are the increase in the incidence of animal diseases, the emergence of new diseases, the problem of common human and animal infectious diseases, the promotion of government and animal welfare groups, and the introduction of new vaccine products, while the market growth limiting factors are mainly the maintenance of the effectiveness of vaccine products. The high cost of storage and the increase in health-oriented vegetarianism have led to a reduction in the demand for meat products and an indirect effect on the growth of the animal vaccine market.

The worldwide market for Animal Health Care is expected to grow at a CAGR of roughly 5.0% over the next five years, will reach 61500 million US\$ in 2023, from 45800 million US\$ in 2017, according to a new GIR (Global Info Research) study.
