Animal ID RFID glass tags are implantable electronic identification devices that contain an RFID chip that can store the animal's identity information and health data. Made of biodegradable glass material, this tag can be implanted under the animal's skin, has good tissue compatibility, and is not prone to rejection. Through an external RFID reader/writer, information can be read and written contactlessly, enabling rapid identification and tracking of individual animals. Animal ID RFID glass tags are widely used in the fields of pet management, animal husbandry, and wildlife protection, improving the accuracy and convenience of individual animal identification.
