## Abstracts

The global Animal Implanted Microchip market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Animal Implanted Microchip is a small computer chip with a serial number written on it. The wafer is housed in a small, smooth, non-repellent glass body, inside a hypodermic needle. Once an animal has been microchipped, it can always be identified because of that unique serial number and cannot be lost, altered or stolen.
