Animal model is a living, non-human animal used during the research and investigation of human disease, for the purpose of better understanding the disease without the added risk of harming an actual human being during the process. Animal models have been used to address a variety of scientific questions, from basic science to the development and assessment of novel vaccines, or therapies. The use of animals is not only based on the vast commonalities in the biology of most mammals, but also on the fact that human diseases often affect other animal species. It is particularly the case for most infectious diseases but also for very common conditions such as Type I diabetes, hypertension, allergies, cancer, epilepsy, myopathies and so on. Not only are these diseases shared but the mechanisms are often also so similar that 90% of the veterinary drugs used to treat animals are identical or very similar to those used to treat humans.

Global key players of animal model services include Charles River Laboratories, Envigo, Taconic Biosciences, etc. The top three players hold a share about 40%. North America is the largest market, has a share about 39%, followed by Asia-Pacific and Europe, with share 28% and 25%, separately.

The Global Info Research report includes an overview of the development of the Animal Model Services industry chain, the market status of Academic & Research Institutes (Rats, Mice), Pharmaceutical & Biotechnology Companies (Rats, Mice), and key
