According to our (Global Info Research) latest study, the global Animal Ultrasonic Cutting Hemostatic Knife System market size was valued at US\$ 1730 million in 2025 and is forecast to a readjusted size of US\$ 2411 million by 2032 with a CAGR of 4.9% during review period.

The animal ultrasonic cutting and hemostasis system is an ultrasonic energy surgical device specifically designed for veterinary surgery. It converts electrical energy into 55.5kHz high-frequency mechanical oscillations via a transducer, causing the blade to vibrate and cut tissue while simultaneously denaturing and coagulating proteins, achieving simultaneous cutting and hemostasis. It features minimal thermal damage, less smoke, and lower bleeding, and is widely used in pet surgery, veterinary medicine, and animal experiments. The global unit price of an animal ultrasonic cutting and hemostasis system is \$1106, with annual sales of approximately 1.52 million units and a global production capacity of 1.7 million units. The industry profit margin is 18%.

The upstream industry mainly includes suppliers of core components such as ultrasonic transducers, piezoelectric ceramics, precision-machined blade parts, and high-frequency generators, involving multiple disciplines including acoustics, electronics, and precision manufacturing. The downstream industry covers end-users such as pet hospitals, veterinary stations, animal experimental centers, and research institutions, selling through veterinary instrument distributors, professional exhibitions, and online platforms, serving canine and feline surgery, livestock diagnosis and treatment, and animal experimental research.
