Abstracts

The global Animal Vaccine Culture Medium market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Animal vaccine culture medium is a type of nutrient solution used to culture animal cells and viruses, usually composed of various chemical substances. Vaccine manufacturers use vaccine culture media to produce animal vaccines, which are important tools for preventing and treating animal diseases.

The main components of animal vaccine culture media include carbon sources, nitrogen sources, inorganic salts, and growth factors, etc. These components provide the basic nutritional substances required for the growth of animal cells and viruses. Different types of cells and viruses require different culture media, so vaccine manufacturers must choose specific media that are suitable for their production process.

Commonly used animal vaccine culture media include:

Dulbecco's Modified Eagle Medium (DMEM): used to culture mammalian cells and viruses.

Minimum Essential Medium (MEM): used to culture mammalian cells and viruses.

Leibovitz's L-15 Medium: used to culture a variety of animal cells.

Eagle's Minimum Essential Medium (EMEM): used to culture mouse and chicken embryo cells.

Medium 199: used to culture animal cells and viruses from pigs, cattle, sheep, etc.

The formulation and components of animal vaccine culture media may vary depending on the manufacturer and vaccine
