## Abstracts

According to our (Global Info Research) latest study, the global Anime Short Drama Platform market size was valued at US\$ 1053 million in 2025 and is forecast to a readjusted size of US\$ 2434 million by 2032 with a CAGR of 12.7% during review period.

Anime short drama platforms are digital online platforms specifically designed for distributing, playing, and interactively watching short animated series. They support online playback, downloading, and social sharing of short animated episodes. These platforms not only offer content viewing but may also integrate personalized recommendations, comments, favorites, sharing, and interactive storyline branches. Some even connect with creator tools or generative AI platforms to achieve integrated content creation, publishing, and distribution. Their core objective is to provide viewers with a high-frequency, fragmented, and interactive anime short drama viewing experience, while offering content distribution, traffic monetization, and data analysis support for creators and businesses.

The market prospects for anime short drama platforms are vast. On one hand, the global demand for fragmented, interactive, entertaining, and immersive anime content from short video users and young people is strong, making streaming platforms a major entry point for content consumption. On the other hand, the development of generative AI, cloud rendering, and multimodal technologies enables creators to quickly produce high-quality short drama content, increasing the platform's content supply. In the future, with the popularization of mobile internet, social media and streaming media, streaming platforms will not only carry entertainment and leisure content, but will also serve scenarios such as education and training, brand marketing and virtual idols, realizing an

ecological closed loop of content creation, distribution and commercial monetization, and promoting the rapid development of the global animation micro-drama industry.
