## Abstracts

The global Anime Short Dramas market size is expected to reach \$ 2790 million by 2032, rising at a market growth of 13.7% CAGR during the forecast period (2026-2032).

Anime short dramas are short animated content, typically ranging from 1 to 5 minutes in length, presenting a complete story or continuous plot using 2D or 3D animation. They integrate plot, characters, scenes, and sound effects, and are rapidly produced using digital technology and sometimes AI-generated tools to meet the demand for fragmented content consumption. Anime short dramas emphasize rapid production, creative diversity, and easy dissemination, and can be broadcast on social media platforms, short video platforms, or streaming media. They can also be used in entertainment, education, brand promotion, and virtual idol scenarios, characterized by low cost, high frequency, personalization, and interactivity.

The market prospects for anime short dramas are broad. On the one hand, the global demand for high-frequency, fragmented, and interactive content from short video users and young people continues to grow, driving the rapid expansion of short drama consumption. On the other hand, the maturity of generative AI, cloud rendering, motion capture, and multimodal animation technologies has reduced production costs and shortened creation cycles. In the future, anime short dramas will not only be an important form of entertainment content but will also play a significant role in advertising and marketing, education and training, social interaction, and the virtual idol economy. With improved content quality and more sophisticated platform distribution channels, animated short dramas are expected to become an important infrastructure for digital content creation and consumption, and drive the intelligent development of the global short video and digital animation industry.
