Anionic acid fixing agent refers to a fixing agent formed by combining anionic dyes with cationic polymers or high molecular weight substances such as regenerated cellulose. Anionic dyes are negatively charged, while cationic polymers or regenerated cellulose are positively charged. The two attract each other through electrostatic action to form a stable color complex, thereby improving the color fixation and color fastness of the dye. Anionic acid fixing agents have high color fastness, good color fixation, and are environmentally friendly. They are not only widely used in the textile printing and dyeing industry, but also in the papermaking industry. Anionic acid fixing agents are also used to improve the color, quality and printing effect of paper. They are also used in leather processing, wood antiseptic, fabric shrinkage prevention and other industries.
