Annealing service is an important metal heat treatment process, mainly used to improve the mechanical properties and physical properties of materials. Annealing is to reduce the hardness of the material, improve the machinability, eliminate residual stress, stabilize the size, reduce the tendency of deformation and cracks, refine the grains, adjust the structure, eliminate structural defects, and uniform the material structure and composition through appropriate heating and cooling treatment. , improve material properties or prepare the structure for subsequent heat treatment.

The main demand comes from automotive, aerospace, machinery, tooling, metal fabrication, construction, medical devices, electrical components, precision machining, foundries, and steel/aluminum/copper alloy processing. Annealing is widely used before or after machining and forming because it improves workability, reduces cracking risk, and helps parts maintain dimensional stability.

Asia-Pacific is the largest regional market, supported by China, Japan, South Korea, India, and Southeast Asia manufacturing in automotive, machinery, steel, electronics, and industrial components.

North America has strong demand from aerospace, defense, automotive, oil & gas, medical devices, and precision manufacturing.

Europe is a mature but high-value market, driven by automotive, aerospace, industrial

machinery, medical technology, energy, and precision engineering. Germany, Italy, France, the UK, and the Nordic countries are important demand centers.
