According to our (Global Info Research) latest study, the global Annular External Casing Packer market size was valued at US\$ 135 million in 2024 and is forecast to a readjusted size of USD 174 million by 2031 with a CAGR of 3.8% during review period.

Annular External Casing Packer is a type of packer designed to be installed on the outside of a casing string to provide effective zonal isolation within the annular space between the casing and the wellbore. Unlike traditional internal packers, an annular ECP is activated—typically through hydraulic pressure—once the casing is in place, causing its expandable rubber or elastomer element to seal against the borehole wall. This creates a barrier that prevents fluid migration between geological zones, enhances cement placement, and improves overall well integrity. Annular ECPs are especially valuable in challenging formations, such as unconsolidated or fractured zones, and are widely used in both vertical and horizontal wells to support efficient, long-term well performance.
